

El Camino becomes Distributor and Design Partner of REFLEX CES in Germany

May, 26th 2020, Mainburg, GERMANY – German-based El Camino, a company specialized in programmable logic and functional verification, announces its partnership with REFLEX CES, as a Distributor and Design Partner.

Started in 1999 and headquartered in Mainburg (Bavaria, Germany), El Camino is a well-established design house for programmable logic and functional verification.

With an extensive FPGA know-how, they can handle complex FPGA projects, consult and train on all aspects of programmable logic.

“We are very excited to embark the partnership with REFLEX CES. This complements very well our capabilities as programmable logic design house with their high-end FPGA SOMs (System-on-Modules) and PCIe boards” says Roland Neumüller, CEO of El Camino.

“Our El Camino team has a deep knowledge and experience on all aspects of FPGA designs and with the exciting and innovative FPGA boards from REFLEX CES we get a quick and ideal solution for many applications. We look forward to working closely with the REFLEX CES team to bring additional value to our customers and to grow their business in Central Europe.”

Based in Paris, France, REFLEX CES is a well-known and trusted supplier to major OEMs across the world, since 2000.

“We are thrilled to work with El Camino as a new Distributor and recognized Design Partner in Germany. We look forward starting this partnership and expand our customers base where El Camino is bringing its deep expertise and regional footprint, very complementary to REFLEX CES high-end FPGA boards and modules products” stated Eric Penain, Chief Business Officer of REFLEX CES.

REFLEX CES’ team of highly skilled engineers has been focused on designing and manufacturing high-speed boards and rugged system solutions based on high-density FPGAs and processors. Thanks to its expertise in hardware, firmware, software, mechanics, CAD and signal integrity, REFLEX CES offers full turnkey solutions, or COTS boards based on the latest Intel® or Xilinx® FPGA technologies.

REFLEX CES FPGA boards have almost limitless applications and can be easily adapted in order to fulfil new projects and required customers’ specifications.
